

Titan Trinity — System Architecture Diagram

Internal Structure of Titan Trinity

Trinity Task Lifecycle

Step 0 — Intent Input

"What are you trying to do?"

Intent Parser

Core Router

Trinity Run Created

Reasoning Steps

Execution Engine

Business Artifact

Artifacts include:

tz_quotes

tz_jobs

tz_checklists

tz_invoices

tz_payments

ext_social_media_posts

Trinity Database Model

tz_trinity_tasks

tz_trinity_runs

tz_trinity_steps

tz_trinity_artifacts

Additional supporting tables:

tz_trinity_agents
tz_trinity_tools
tz_trinity_memory

Cognitive Model

Titan Trinity mimics a business brain:

CreatiCore → imagination / growth
LogiCore → process / execution
EconoCore → constraints / finance

Together they cover the three fundamental flows of a service business:

Demand Flow → CreatiCore
Work Flow → LogiCore
Money Flow → EconoCore

Titan Platform Layers

User Interface
Titan Command / PWAs

Communication Layer
Titan Talk

Reasoning Layer
Titan Trinity

Automation Layer
Titan Pulse

Event Layer
Titan Signal

Execution Engines
Titan Work

Final System Philosophy

Users interact with tasks, not AI.

Examples:

Create a quote
Book a job
Send invoice
Promote an offer

Titan Trinity interprets the task and routes it to the correct cognitive core.

The platform behaves like a business operating system rather than a collection of disconnected tools.
