

Titan Money — The Bring-Your-Own Finance Engine

Overview

Titan Money is a privacy-first financial operations layer that lets businesses manage invoicing, payments, payroll coordination, reconciliation, and revenue automation using their own payment and accounting providers.

Instead of charging platform transaction fees or locking users into proprietary billing infrastructure, Titan Money connects directly to services the business already controls.

Result:

lower costs

faster cashflow

full ownership of financial data

no platform tax 🏡

Core Principle

Traditional SaaS finance stack:

business → SaaS billing platform → payment processor → accounting system

Titan Money stack:

business → Titan → user payment provider → accounting platform

Titan orchestrates.

The business owns everything.

Bring Your Own Payments

Titan Money supports direct integration with:

- card processors
- bank transfer rails
- PayID / instant transfer systems
- accounting APIs
- payroll systems
- expense tracking platforms

Users connect their own credentials and keep full control.

Instant Invoice Creation

Invoices can be generated from:

- completed jobs
- approved quotes
- recurring services
- contract milestones
- manual chat commands
- lifecycle automation triggers

Example:

“Send invoice for Smith Street clean”

Titan:

- creates invoice
- attaches service details
- selects payment method
- sends to customer
- records accounting entry

One message.

PayID & Fee-Free Payments (Australia Advantage)

Titan Money supports QR-based instant payment workflows using bank-native rails such as:

- PayID
- direct account transfer
- instant settlement methods

Benefits:

no card fees

no processor percentage

faster settlement

lower dispute risk

Especially valuable for service businesses with frequent invoices.

Stripe / PayPal Without Platform Fees

Users can connect their own:

- card processors
- digital wallets
- payment gateways

Titan never resells transaction processing.

Instead:

customer pays → provider settles → Titan records

This avoids markup layers common in vertical SaaS tools.

Automated Overdue Follow-Ups

Titan monitors invoice lifecycle automatically.

Examples:

invoice issued
invoice viewed
invoice unpaid
invoice overdue
invoice escalated

Then triggers:

- reminders
- payment links
- escalation notices
- re-send workflows
- follow-up scheduling

All configurable.

Lifecycle-Based Revenue Automation

Titan Money integrates directly with service workflows.

Example pipeline:

job completed → proof uploaded → invoice issued → reminder scheduled → payment received
→ receipt generated

No manual tracking required.

Payroll Coordination Layer

Titan Money can coordinate payroll signals with:

- shift completion
- attendance tracking
- job verification
- contractor invoices

- subcontractor approvals

Example:

shift verified → payable created → export to payroll system

Keeps payroll aligned with operations.

Equipment & Asset Cost Tracking

Businesses can attach expenses to:

- job sites
- service types
- teams
- vehicles
- equipment
- contracts

Examples:

chemical usage per site
machine maintenance cost
vehicle fuel allocation
tool replacement tracking

Titan converts operational activity into financial insight automatically.

Expense Capture From Messaging

Users can log expenses conversationally:

“Bought supplies \$84 Bunnings”

Titan:

- records expense
- categorizes item
- attaches receipt (if provided)
- syncs accounting platform

Fast mobile capture 

Quote-to-Cash Pipeline Automation

Titan Money links directly with quoting workflows.

Example:

quote approved → booking confirmed → job completed → invoice issued → payment tracked

Revenue pipeline stays synchronized automatically.

Recurring Service Billing

Supports automation for:

- weekly cleans
- fortnightly visits

- monthly contracts
- subscription services
- maintenance agreements

Titan:

- generates recurring invoices
- tracks payment status
- adjusts schedule changes
- handles missed visits
- recalculates billing

No spreadsheet tracking required.

Real-Time Cashflow Visibility

Titan provides operational finance insights such as:

- overdue revenue risk
- expected payments this week
- projected income from scheduled jobs
- unpaid invoices by customer
- recurring contract value

This connects scheduling intelligence with financial forecasting.

Accounting Platform Integration

Titan Money connects directly to accounting providers via user credentials.

Examples:

- invoice sync
- expense sync
- payment reconciliation
- contact updates
- tax categorization
- reporting exports

Accounting remains the source of truth.

Titan remains the orchestration layer.

Approval-Based Financial Automation

Financial actions can require confirmation before execution:

assistant proposes invoice → user approves → invoice sent
assistant proposes reminder → user approves → reminder sent
assistant proposes escalation → user approves → escalation triggered

Prevents accidental automation errors.

Multi-Channel Payment Requests

Customers can receive payment links through:

- messaging apps
- SMS
- email
- portal interface
- QR codes
- receipts

Titan adapts delivery automatically.

Offline Financial Workflow Support

When connectivity drops:

Titan can:

- queue invoices
- store receipts
- capture expenses
- record job completion signals

Then sync once online.

Ideal for field teams.

Enterprise Financial Control Mode

Organizations can enforce routing rules such as:

large invoices → approval required
contract invoices → finance team only
subcontractor payouts → supervisor approval
expense reimbursements → manager approval

Maintains governance without slowing operations.

Strategic Positioning

Titan Money is not:

a billing platform
a payment processor
a transaction intermediary

Titan Money is:

a financial orchestration layer that connects the business directly to its own payment infrastructure.

Summary

Titan Money enables:

- fee-free payment routing options
- instant invoice generation from operations

- automated overdue reminders
- recurring service billing
- conversational expense capture
- payroll coordination signals
- asset cost tracking
- accounting platform synchronization
- approval-based finance automation
- real-time cashflow visibility

It transforms invoicing and payments into a workflow-native revenue engine, fully controlled by the business.
